

United Trolley Oil is a product designed to adhere to trolley hooks in process plants. This product is compounded utilizing a commercial H-1 machinery oil and an H-1 adhesive additive. For adequate coverage, United Trolley Oil should be heated between 100°F to 140°F. This lubricant can be floated on water, and it is recommended that it be used in a vessel that cleaned hardware can be dipped into. A drainback system should be used immediately after dipping to collect excess oil and/or oil-water mixture from the hardware. Blown air can also be used to remove excess product.

TYPICAL SPECIFICATION DATA

UNITED TROLLEY OIL	
Viscosity @ 100°C (cSt)	8.0
Viscosity @ 40°C (cSt)	52.5
Viscosity Index	121
Density (lb/gal)	7.20
Pour Point (°C)	-18
Pour Point (°F)	0
Flash Point (°C)	216
Flash Point (°F)	421
